SAP troubleshooting techniques

Using transaction

SE11, create a table (ZTABLE) with the same fields as the table in the external database, make sure that the type and lengths of the fields are identical.

Using transaction

SE11, create a view (ZTABLE\_VIEW, projection view) using BASIS table ZTABLE

Using SVRMGRL>

create

dblink REMOTE\_DB as connect to remote\_user identified by password; (database link created)

drop table

ZTABLE; (table dropped)

create

synonym ZTABLE for ZTABLE@REMOTE\_DB; (synonym created)

Using transaction

SE16 , type in ZTABLE\_VIEW and hit RETURN

Enter

value in key fields and hit execute. (displays rows from the remote table)

Tips

and Tricks

To see the complete text of an error/warning

message on the SAPGUI status bar, right click on the message and drag left.

To prevent your spool requests getting

deleted from the BASIS cleanup jobs, you need to uncheck the Delete

after print checkbox in the print control screen, execute transaction

SP01, find your spool#, click on Attributes and change the Delete

After date

Short cuts using the OK-code box.
