You can unlock your phone easily and safely by setting up Touch ID. A sensor in the home screen button of your iOS mobile device recognizes your fingerprint and unlocks the screen. Learn how to set up Touch ID by following this step by step guide which also contains a video tutorial after the last step.

Details:

Please note: Also see the video after the last step to see a demonstration of the set up.

Your device's home button and your finger should be clean and dry. Open Settings and tap Touch ID & Passcode. Enter your passcode. Tap Add a Fingerprint. Place your finger on the home button (don't press the button). Lift your finger and place it on the home button again for a few times. The instructions on screen tell you exactly when to lift and rest your finger on the home button. In the next screen you are asked to adjust your grip. That means you should place the outer part of your finger on the home button. Just as you would when holding the device normally. Lift and rest the edge of your finger again. When you are finished, you will see a screen saying Complete. Your Touch ID is ready and can now be used to unlock your phone.
