After setting a new password on a data source, an issue can arise in Power BI Desktop when the app tries to connect to the data source. This article explains how to fix the issue. Details: 1. Check if you use the latest version of Power BI Desktop and upgrade if necessary. You can find more details [here](#). 2. If the issue is still prevalent with the newest version, click "File" in the application's head bar.

3. Next, click "Options and settings", followed by "Data Source Settings".

4. Select the data source you need from the list and click "Edit permissions".

5. In the new dialogue box, click "Edit..." under "Credentials".

6. Enter the new credentials used to access the data source in the appropriate fields in the new dialogue box, and "Save" them. 7. In the "Edit Permissions" dialogue box, click "OK", and "Close" the "Data source settings".
