Keeping your version of Power BI Desktop up to date not only grants you new monthly features, it is also required as a first step to fix many issues you might have. Details:1. Checking if you have the latest versionAfter starting Power BI Desktop, click on "Help", then "About" and check the version in use.A new update is launched every month, so you can compare your version's release month to the current month. 2. Updating Power BI Desktop1. If a new update is available, the message "Update available (click to download)" will show in the lower right corner of your application. Click on the message. 2. You can find a summary of the new features in the latest update.To update your application, click the button "Download Power BI Desktop". 3. Click "Download Free >" to open the Power BI Desktop page in Microsoft Store and update your application.

Note: If you downloaded Power BI Desktop from another source than the Microsoft Store, your way of updating Power BI Desktop might deviate from the way presented in this article. In any case, click on the message "Update available (click to download)" to start your updating process (see step 1) and follow the instructions which pop up afterwards.
