Solution:

This article shows a guide on how to save a PowerPoint presentation or slide show as an animated GIF.

Details:

1. Advise the user that in the first place they need to set up their presentation, complete it with any illustrations, animations, and transitions they want.

2. Once done, advise the user to click on File > Export > Create an Animated GIF.

3. The default quality is Medium. Tell the user to use the dropdown box to change the quality to a higher or lower setting.

4. Advise the user to select the minimum Seconds spent on each slide. Time spent can be longer, but not shorter, than the minimum.

Note: The default value for this minimum setting is one second.

5. Ask the user to select Create GIF.

6. PowerPoint will begin saving user's presentation as a GIF, and it will notify them when it is done.

Note: Processing time depends on the file size and quality setting.

7. The end result will be a continuously looping .gif file. PowerPoint doesn't let user change it to a finite number of repetitions.

Note:

All animations, transitions, and media (such as video or GIF) on user's slides will be included in the finished GIF file.If user's slides don't include animations, transitions, or media, then the frames-per-second (FPS) rate of the finished GIF will be the inverse of the Seconds spent on each slide setting user chooses when they create the GIF.If a slide in user's file is hidden, it will be skipped entirely when the GIF is created.
